

Coca Cola Park Stadium North Pavilion and Parkade

Client: City of Johannesburg

Location: Doornfontein,
Johannesburg

Date: February 2009

Value: R110 million

The project called for the demolition of existing suites on the North stand and the construction of structural steel framework to carry an additional 5 000 seats under a canopy roof. A seven-stop lift core and decorative steel arch were built to enhance the North elevation of the stadium. A five level parkade was constructed on the eastern side of the complex. This 38 000 square metre structure also accommodates stores, emergency rooms, retail and concessionaire facilities.
