

**Sasol Chemcity
(CEIP Phase 2 Civil
Infrastructure Development
Project)**

Client: Sasol Limited

Location: Sasol 1, Sasolburg

Date: April 2015

Value: R 58 Million

This Infrastructure project entails the construction of the following:

- 3.5km of new roads,
- 12 000m² paved walk ways & bicycle lanes.
- The installation of 3 km bulk sewer, 1 km storm water, 2,5 km water and 3 km fire water reticulation.
- These services are for phase 2 of the Chemcity Eco Industrial Park.

Inclusive of our project is the testing and completion of existing services installed in phase 1. The Chemcity site area is 160 ha.

The site is characterized by a high water table and poor and unstable soil conditions, presenting specific challenges in the execution of the works.

Reduction of the Carbon Footprint & Environmental Planning was essential as this is an Eco Park with a green belt area & landscaped dams.
